The sidewheel Qualcast Model E was introduced in the late 1920s, just a few years after the Derby-based company started to manufacture mowers. It became one of the most popular lawn mowers ever produced in the UK and remained in production until the 1950s. By that time, Qualcast claimed to have produced over two million examples.

The gear version of the Caledonia was introduced in 1895 and the chain drive model around five years later. The chain drive model was one of the first hand mowers to feature a "roller" chain (like the chain used on modern bicycles) rather than the earlier block chain.
